LANÇAMENTO

CILINDRO DE RODA

Agora a família ficou completa.
Chegou o Cilindro de Roda COBREQ.

Combine os produtos COBREQ e garanta o melhor funcionamento do sistema de freio de seu veículo.

COBREQ®

CILINDRO de Roda

O cilindro de roda é um componente fundamental no sistema de freio a tambor, pois quando acionado, pressiona as sapatas com lonas contra a pista de frenagem do tambor, provendo a desaceleração do veículo.

Tecnologia de material

Seguindo os padrões construtivos e de projeto das montadoras, os cilindros de roda COBREQ são fabricados conforme o projeto original, com Ferro Fundido HT250 ou em Alumínio ZL101A.

Os itens fabricados em ferro fundido oferecem elevada resistência a temperaturas e ao desgaste, além de amortecer vibrações.

Já os itens produzidos em alumínio, mais leves e maleáveis, permitem construções mais complexas sem deixar de entregar a robustez necessária para este tipo de peça/aplicação.

Por fim, as especificações das borrachas “EPDM” empregadas nas vedações e capas de proteção, garantem o devido funcionamento e resistência ao fluido de freio, evitando vazamentos indesejados.

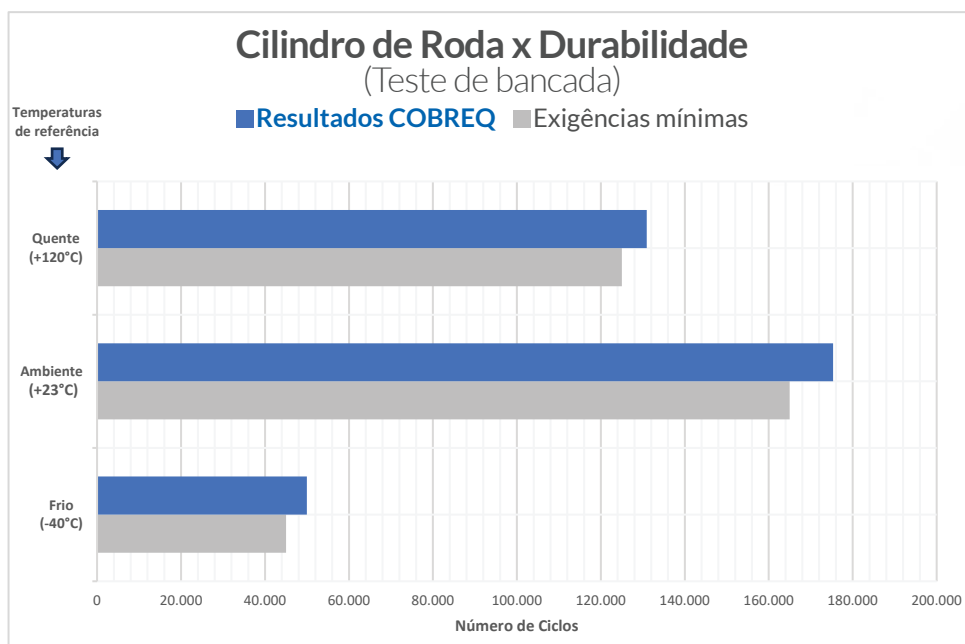

Exemplo de Cilindro de Roda de alumínio

Nota: EPDM, em inglês: ethylene propylene diene methylene rubber, em português: borracha etileno-propileno-dieno.

CILINDRO de Roda

Durabilidade

Para avaliar o desempenho e durabilidade do cilindro foram realizados testes de desgaste em diferentes níveis de temperatura (frio, ambiente e quente).

Os produtos testados apresentaram deslocamento uniforme, ausência de travamento e/ou vazamento, resultados acima dos requisitos mínimos estabelecidos, traduzidos em maior durabilidade do produto.

Componentes

Os cilindros de roda são conjuntos constituídos basicamente por:

- Carcaça
- Pistões
- Mola
- Anéis de vedação
- Parafuso de sangria
- Hastes de pressão
- Capas de proteção

Há modelos de cilindros de roda que as molas são substituídas por anéis de retenção.

Exemplo de
Cilindro de Roda
de ferro fundido
